Les Coteaux du Pic: 1100 sq.m. of photovoltaic installations

Les Coteaux du Pic :

- Winemaking co-operative
- More than 150 winegrowers in the PIC SAINT LOUP region.
- One of the largest photovoltaic installations
- A first for the Languedoc-Roussillon region!

Saint Mathieu-de-Trévières site

Valfaunès site

The photovoltaic installations in the Valfaunès and Saint Mathieu de Trévières communes are made up of nearly 1000 panels and can generate 163.8 kWc. The annual electricity production of 213 MWh is equivalent to the average energy consumption of 70 households.

Les Coteaux du Pic's aim is to balance out the carbon footprint of its 3 cellars, i.e. reduce the winemaking cooperative's impact on the environment to zero. According to Monsieur SCOHY, manager of the cooperative: "we're producing our own "green" electricity - without any waste or emissions (no sound pollution), and that alone should be seen as justification of this initiative for future generations. Our reasons for doing this at the Coteaux du Pic corporative are first and foremost ecological".

The winemaking cooperative includes a grape harvesting centre in the commune of Notre Dame de Londres, a vinification and storage site in the village of Valfaunès, and a vinification, storage and breeding site - as well as a bottling centre - in Saint Mathieu de Trévières.
